

Connect Anything

The MESG infrastructure allows your business to connect to any technology which sends or receives data, regardless of the programming language.

Blockchain integration is costly and time-consuming

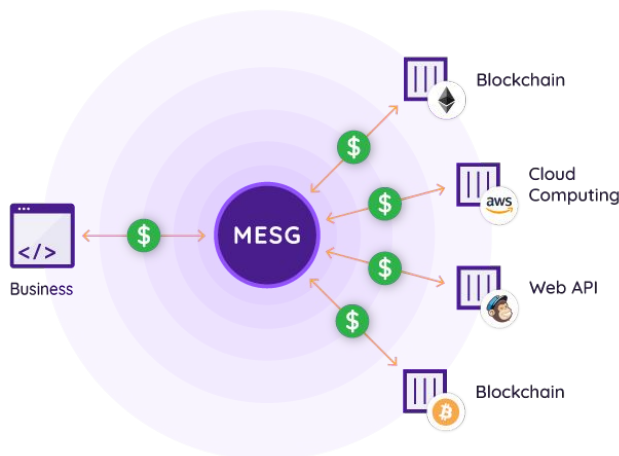

With MESG, connect to the blockchain components your business needs, avoiding the constraints of full adoption.

Expanding a business involves costly tech overhauls

MESG is a solution-building platform that doesn't limit a customer to a predefined channel of growth. Implement the features you need, when you need them.

MESG enables the rapid development of unique business solutions

The MESG Economy enables large-scale interoperability

IoT usefulness is limited by incompatibility

MESG allows previously-incompatible devices to exchange information, creating a new world of business opportunities.

Our Vision

To be the first universal infrastructure to bridge legacy companies moving into a trustless landscape. The future of business is decentralized.

Revenue Model

- All users stake tokens to access the MESG Network
- Miners, who support the network, stake tokens as collateral
- Developers are rewarded each time their connections are used
- As more tokens are staked, supply decreases resulting in token scarcity

Algorithmic Token Offering (ATO)

Daily released token supply will be calculated algorithmically depending on the volume and activity of the token.

Token Distribution

Public token price	\$0.4
Token supply	250,000,000
Sale Distribution	62.5%
Reserve	20%
Team and Founders	12,5%
Partners & Bounties	5%

Roadmap

2019

Q1

+5 partners using MESG

Marketplace

- Runs on Ethereum Mainnet
- Developers can earn tokens by licensing their Modules
- Users reuse existing Modules to create applications

Release of the MESG Token

- Listed on exchanges
- Created as an ERC20 on the Ethereum Mainnet
- Enables access to the Modules on the Marketplace

Q2

+10 partners using MESG

MESG Application

- No need to code anymore
- Anyone can build a MESG application

Q3

+10 partners using MESG

Test Net

- Modules are executed directly on the decentralized network
- Users no longer need to run Modules on their own computers

2020

Q1

+25 partners using MESG

Public Network

- Release of native MESG Token
- Launch of the full MESG Token economy
- Self-regulating ecosystem consistently increasing the value of the MESG Token
- ERC20 tokens converted to MESG Tokens

MESG Enterprise Solutions

- A profit-driven subsidiary of the MESG Foundation
- Delivering the global standard for the enterprise adoption of decentralized technology

Incubated by Yellow, a premier blockchain incubator and fund with a track record of success.

MESG The new economy of application development
